

INVASIVE PLANT ALERT

Help keep our forests free of invasive plants!

THERE'S MORE TO THESE PLANTS THAN MEETS THE EYE...

spotted knapweed

orange hawkweed

Herb Robert

yellow star thistle

Scotch broom

Invasive plants are non-native plants that adversely affect the environment, the economy, or both.

Aggressive growth patterns and lack of natural enemies make these plants difficult to control.

Invasive plants destroy fish and wildlife habitat and impede recreation.

How you can help:

- Use certified weed free products
- Clean mud and seeds from your vehicle, equipment and animals before entering new areas
- Avoid traveling through areas infested with invasive plants
- Learn to identify native and invasive plants
- Report locations of invasive plants to the forest district office or your county weed board

English ivy

Canada thistle

leafy spurge

purple loosestrife

tansy ragwort

Japanese knotweed

houndstongue
